Mirth CLI documentation

Where can I find some documentation on using the Mirth CLI tool?
I'd like to be able to set up a couple of scheduled tasks to stop/start all interfaces during db maintenance times.

Available Commands:
status
Returns status of deployed channels

deploy [timeout]
Deploys all Channels with optional timeout (in seconds)

import "path" [force]
Imports channel specified by <path>. Optional 'force' overwrites existi
ng channels.

export id|"name"|* "path"
Exports the specified channel to <path>

importcfg "path"
Imports configuration specified by <path>

exportcfg "path"
Exports the configuration to <path>

importalerts "path"
Imports alerts specified by <path>

exportalerts "path"
Exports alerts to <path>

importscripts "path"
Imports global script specified by <path>

exportscripts "path"
Exports global script to <path>

importcodetemplates "path"
Imports code templates specified by <path>

exportcodetemplates "path"
Exports code templates to <path>

importmessages "path" id
Imports messages specified by <path> into the channel specified by <id>

exportmessages "path" id [xml|raw|transformed|encoded] [pageSize]
Exports all messages for channel specified by <id> to <path>

channel undeploy|deploy|start|stop|pause|resume|stats id|"name"|*
Performs specified channel action

channel remove|enable|disable id|"name"|*
Remove, enable or disable specified channel

channel list
Lists all Channels

clearallmessages
Removes all messages from all Channels

resetstats
Removes all stats from all Channels

dump stats|events "path"
Dumps stats or events to specified file

user list
Returns a list of the current users

user add username "password" "firstName" "lastName" "organization" "email"
Adds the specified user

user remove id|username
Removes the specified user

user changepw id|username "newpassword"
Changes the specified user's password

quit
Quits Mirth Connect Shell

When I even try to launch Mirth CLI, I get "error, could not login to server". I'm attempting to launch it from the same server where it is installed. Are there special parameters I need to use to launch it?

check the file mirth-cli-config.properties in the conf directory. You should have the correct user and password

resetstats command in the mirth shell only applies to ALL channel stats. Is there another command or switch to specify a channel to reset and which specific stats to reset? (example: errors and sent)

or can i use **resetstats** command and pipe it to a specific channel or something?

thanks
